

Howden MK4/WRV255.220.26
A real booster block
The longest compressor produced

Compressor can be delivered complete overhauled.
Oil pump AS Viking 4195

For me a well-known oldie – the compressor is a the very strong MK4/WRV255/220.26 –a real booster compressor with a working length of the rotor of 2,2 x 25,5 cm .

The Design it typical the Holima design - the typical was an oil tank under the compressor and the oil separator on the end- This unit is constructed in the 70 -80 by Howden Ambergen in the Netherlands. Later Well-known as Special Engineered Systems.

Unique are the following details : oil filter with low pressure drop and standard heavy duty magnetic Colom , strong oil pump – long oil tank and pre oil separator and the demister separator on the end . Mid 2004 , there were even modern oil separators designed with 4 stage oil separation . Interesting detail was that mostly E-motors were used , which have no air flow over the compressor.

The compressor unit can also be sold in parts, the compressor can be delivered overhauled – on request
